

SAFTE

HOW IT WORKS

Whatever the reason you need help - maybe you've fallen, slipped in the bathtub, or had a sudden medical emergency - SAFTE (Safety Alert for the Elderly) calls for assistance, automatically. SAFTE is an effective, affordable monitoring device with an innovative design that provides Total Protection by operating both actively and passively.

1A

The Pendant has a range of up to 1,000 feet with a signal that can penetrate wood, cement, steel or glass. You can wear it anywhere - throughout your home, in your yard, or on a neighborhood walk.

2

The SAFTE Unit is the key to our system. It receives signals from the motion detector to indicate normal activity or lack of movement. Activation of the pendant or lack of motion detector immediately sends a message to the communicator to call for help.

1B

The "Lack of Motion" Detector ensures that someone will know if you are not following your normal routine. We are the only company with a patent on this "lack of motion" technology that gives you and your family peace of mind.

3

The Communicator when activated will "seize" your existing phone line to call friends, family, neighbors or emergency personnel with 4 pre-programmed phone numbers and messages. This means no central station and no monthly fees.
